
INDIVIDUAL CONTRIBUTION - PHASE I

Project-Based Learning | Data Structure and Programming in C++

Project	Detective Mystery: The Hidden Truth
Team	Truth Seekers
Team ID	DSCPP-III-2026-T152
Member	Karan Badhani
Student ID	2510360037
Role	Team Lead

Contribution Summary

My main responsibility in Phase-I was to keep the project idea clear and make sure the team was working on the same game plan. I worked on the case concept, project planning and the overall system design. I also prepared and organized the synopsis so that the game idea, OOP design and DSA usage were explained consistently.

Work Completed / Planned in Phase-I

- Finalized the basic detective-game idea and case direction with the team.
- Worked on project requirements, objectives and the investigation workflow.
- Planned the high-level system architecture and major game modules.
- Helped identify the main OOP classes such as Player, Suspect, Clue, Evidence and Location.
- Prepared and maintained the Phase-I synopsis and checked that it matched the project scope.
- Coordinated the Phase-I work and reviewed the material prepared by other team members.

Next Responsibility

During development, I will coordinate module integration, help with the main game flow and review the final implementation before testing and demonstration.

Note: This contribution record reflects the work assigned and prepared during the current Phase-I stage. Implementation tasks will be updated as development progresses.
